

# Basic String Compression

## Description:

Implement a method to perform basic string compression using the counts of repeated characters. For example, the string aabcccccaaa would become a2b1c5a3. If the "compressed" string would not become smaller than the original string, your method should return the original string.

## Examples:

abc -> abc

aabbbccca -> a2b3c3a1

aabcccccaaa -> a2b1c5a3

After completing the challenge please submit it in this [form](#).
